***Visual Voyages* Apr 22 2020 An unprecedented visual exploration of the intertwined histories of art and science, of the old world and the new From the voyages of Christopher Columbus to those of Alexander von Humboldt and Charles Darwin, the depiction of the natural world played a central role in shaping how people on both sides of the Atlantic understood and imaged the region we now know as Latin America. Nature provided incentives for exploration, commodities for trade, specimens for scientific investigation, and manifestations of divine forces. It also yielded a rich trove of representations, created both by natives to the region and visitors, which are the subject of this lushly illustrated book. Author Daniela Bleichmar shows that these images were not only works of art but also instruments for the production of knowledge, with scientific, social, and political repercussions. Early depictions of Latin American nature introduced European audiences to native medicines and religious practices. By the 17th century, revelatory accounts of tobacco, chocolate, and cochineal reshaped science, trade, and empire around the globe. In the 18th and 19th centuries, collections and scientific expeditions produced both patriotic and imperial visions of Latin America. Through an interdisciplinary**

examination of more than 150 maps, illustrated manuscripts, still lifes, and landscape paintings spanning four hundred years, Visual Voyages establishes Latin America as a critical site for scientific and artistic exploration, affirming that region's transformation and the transformation of Europe as vitally connected histories.

Spectacular Nature Feb 19 2020 This is the story of Sea World, a theme park where the wonders of nature are performed, marketed, and sold. With its trademark star, Shamu the killer whale—as well as performing dolphins, pettable sting rays, and reproductions of pristine natural worlds—the park represents a careful coordination of shows, dioramas, rides, and concessions built around the theme of ocean life. Susan Davis analyzes the Sea World experience and the forces that produce it: the theme park industry; Southern California tourism; the privatization of urban space; and the increasing integration of advertising, entertainment, and education. The result is an engaging exploration of the role played by images of nature and animals in contemporary commercial culture, and a precise account of how Sea World and its parent corporation, Anheuser-Busch, succeed. Davis argues

that Sea World builds its vision of nature around customers' worries and concerns about the environment, family relations, and education. While Davis shows the many ways that Sea World monitors its audience and manipulates animals and landscapes to manufacture pleasure, she also explains the contradictions facing the enterprise in its campaign for a positive public identity. Shifting popular attitudes, animal rights activists, and environmental laws all pose practical and public relations challenges to the theme park. Davis confronts the park's vast operations with impressive insight and originality, revealing Sea World as both an industrial product and a phenomenon typical of contemporary American culture. *Spectacular Nature* opens an intriguing field of inquiry: the role of commercial entertainment in shaping public understandings of the environment and environmental problems.

The Nature of Photographic Images Apr 03 2021 Often, photography education tends to orient toward the techniques and process. It is essential to properly learn the basic principles of image design for students to grow into professionals. Understanding the formative nature of photographs is as crucial to art-based photographers as ideology and philosophy. Like the smartphone, new communication and information tools based on digital, internet, and mobile technologies have become dominant in modern people. Artists are actively experimenting with the integration of various genres and expression media. Many visual, performance and installation artists who are receiving worldwide attention today utilize photography as one of their essential mediums. Whether they are photographers or artists who only want to partially take advantage of photography, once they correctly realize the nature of photographs, they will be able to create more profound works. Photography is a plastic art composed of the image and medium. This book deals with the formative nature and signification of photographic images. Gestalt, composition, and color theory, the general principles of art and design, work with photographs' nature. The future revisions will include the relationship between them.

Nature Pictorialized Sep 08 2021 Crandell (landscape architecture, Iowa State U.) demonstrates how the principles of her field have drawn extensively from the basic concepts of art and literature, so that a "beautiful" landscape is one that most closely resembles a painting. She traces the subject back to classical times, but emphasizes how 17th-century European painting manifested in 18th-century gardens. Illustrated in black-and-white. Urban Forest Apr 15 2022 Beyond their esthetic and utilitarian importance, urban trees seem to fill a deeper human need. Perhaps they are reminders of the inexorable cycles of the natural world. Perhaps they serve as eddies and rills of slowness and sureness within the frantic rush of our urban environment. For more than two decades, photographer David Paul Bayles has been making images of trees in cities and suburbs--places of tension, as he puts it, between "what we build and what we grow." This beautifully designed and produced volume showcases his extraordinary vision of urban trees and their often precarious, sometimes triumphant place in the human landscape. Initially drawn to his subject by "the balance and harmony and beauty between the manmade structure and the tree," Bayles has also found and photographed plenty of imbalance and human folly along the way. His images are laconic, almost deadpan, yet at the same time infused with irony, humor, and compassion. They avoid the easy trap of politicization, allowing and encouraging each of us to see the relationship between humankind and trees--in all of its complexity--for ourselves. This much is certain: Those who delve into the

pages of this remarkable book will never again look at the trees around them in quite the same way.

Beyond Light Dec 23 2022 Everybody knows that you need light to be able to see things. But is that really true? The doctor “sees” the unborn baby by using ultrasound. And in a slightly different way so does the bat. The air traffic controller “sees” the oncoming plane by using radar. Soldiers use heat wave to “see” the hidden enemy. Then of course the artist “sees” by using his imagination. And there are more examples: the scanning microscope uses electrons to “see” very small animals, etc. So, seeing with light is just one way of perceiving the world around you. The images in this book are made by using x-rays (the x-rays for finding broken bones). And you will see that x-rays help you see the world in another “light”.

Aurora Nov 17 2019 This new book addresses a gap in the literature, offering an explanation of the aurora's causes, how the occurrence of major events may now be predicted, and how amateur observers can go about recording displays. This is the first serious book about aurora written for practical but non-professional observers. It provides a concise accessible description of the various auroral forms and how to record them, illustrated with color images of recent displays. It contains details of 'Space Weather' forecasting websites, how to interpret and use the information given on these, and how to anticipate auroral activity.

Alfredo Arreguín Nov 10 2021 "Arreguín's palpitations of color and light and

arrested movement awaken our sublimated vision. His paintings seem to force our entire being to experience its livingness as an insatiable yearning and questing of the eyes." - from the Foreword by Tess Gallagher

Born in Mexico in 1935 and a resident of Washington State for nearly five decades, Alfredo Arreguín has long been recognized as a major force in pattern painting. His canvases are tapestries that mingle diverse and interpenetrating influences and images: the traditional crafts of his native Michoacán; the lush rainforests of his homeland and of the Pacific Northwest; Japanese ukiyo-e prints; sacred and endangered animals; gods and and totemic figures; icons like Frida Kahlo and César Chávez; and motifs including masks, eyes, and abstractly patterned tiles. But Arreguín's paintings, for all the apparent flatness of their surfaces, conceal an astonishing depth of perspective. The basis of their composition is a grid of colorful patterns applied to superimposed planes, and below the surface of each completed painting are many others, transformed by the artist's strategic occlusions and erasures. The result is an exuberant, phosphorescent visual interplay in which images combine to form other images, yielding a potent narrative power and pointing up the profound, ambiguous symbiosis between human beings and nature, fiction and reality, and the natural and supernatural worlds. Lauro Flores reveals Alfredo Arreguín as "a genuinely American painter, in the real, hemispheric sense of this term" - an artist of magic, mystery, and revelation whose place in the history of North American art has already been secured.

Nature as Subject May 04 2021 Written by one of the instrumental figures in environmental ethics, Nature as Subject traces the development of an ethical policy that is centered not on human beings, but on itself. Katz applies this idea to contemporary environmental problems, introducing themes of justice, domination, imperialism, and the Holocaust. This volume will stand as a foundational work for environmental scholars, government and industry policy makers, activists, and students in advanced philosophy and environmental studies courses.

Structural Colors in the Realm of Nature Dec 19 2019 Structural colorations originate from self-organized microstructures, which interact with light in a complex way to produce brilliant colors seen everywhere in nature. Research in this field is extremely new and has been rapidly growing in the last 10 years, because the elaborate structures created in nature can now be fabricated through various types of nanotechnologies. Indeed, a fundamental book covering this field from biological, physical, and engineering viewpoints has long been expected. Coloring in nature comes mostly from inherent colors of materials, though it sometimes has a purely physical origin such as diffraction or interference of light. The latter, called structural color or iridescence, has long been a problem of scientific interest. Recently, structural colors have attracted great interest because various photonic architectures, now developing in modern technologies, have been spontaneously created in the self-organization process and have been extensively used as one of the important visual functions. In this book, the fundamental optical properties underlying structural colors are explained, and these mysteries of nature are surveyed from the viewpoint of biological diversity and according to their sophisticated structures. The book proposes a general principle of structural colors based on the structural hierarchy and presents up-to-date applications.

Art of the First Fleet Feb 13 2022 In 1788, nearly 1500 people on 11 sailing ships came ashore at Port Jackson in Western Australia after a grueling four month journey from England.
